

AM

Hi, I'm Aniket Mehare

AI Product Leader · Builder · Dubai, UAE

I ship AI systems that actually work in production.

I bridge the gap between business problems and production AI systems — combining product thinking, product thinking, LLMs, and automation to deliver measurable results in 2–4 week cycles.

From Business Problem to Production AI — in Weeks, Not Months

Most AI projects fail not because of the technology, but because of the gap between strategy and execution. I close that gap. With 10+ years spanning supply chain, e-commerce, and enterprise product management, I bring both the business context and the technical depth to build AI systems that deliver real, measurable outcomes — fast.

Product Thinking

I define the right problem before writing a single line of code. Outcome-first, always. Focus on user needs and business value.

AI Engineering

LLMs, automation pipelines, generative AI — I build and ship end-to-end systems. Connecting models to real-world data and workflows.

Speed to Value

2–4 week delivery cycles. No endless discovery phases. Real results, fast. Iterative shipping to prove value immediately.

What I Can Do For Your Business

AI

AI Systems That Cut Costs & Save Time

Turn manual work into automated systems that run 24/7. Your team focuses on growth, not repetition.

- ✓ 40% faster time-to-market
- ✓ Eliminate 80%+ of manual work
- ✓ 2–4 week delivery
- ✓ Measurable ROI within 90 days

For: Operations leaders scaling without headcount

Workflow Automation — Scale Without Hiring

Connect your systems and eliminate manual work between them. No more copying data or chasing tasks.

- ✓ Scale operations without adding headcount
- ✓ Reduce errors to near-zero
- ✓ Free up 10–20 hrs/week per person
- ✓ Faster customer response times

For: Growing teams hitting capacity limits

Custom SaaS Development

Turn your business process into a subscription product. Productize your expertise into revenue.

- ✓ Working SaaS in 4–8 weeks
- ✓ 6,945+ users acquired in 30 days
- ✓ Multi-tenant, production-ready
- ✓ Revenue-generating from day one

For: Businesses productizing their expertise

Content Ginie — Generative AI for E-commerce at Scale

Cutting shoot-to-live time from 12 days to 7 days at Landmark Group

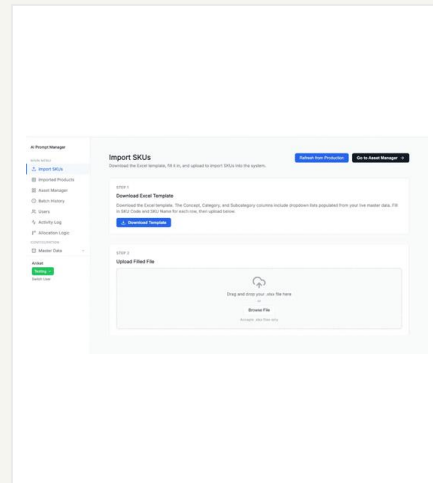

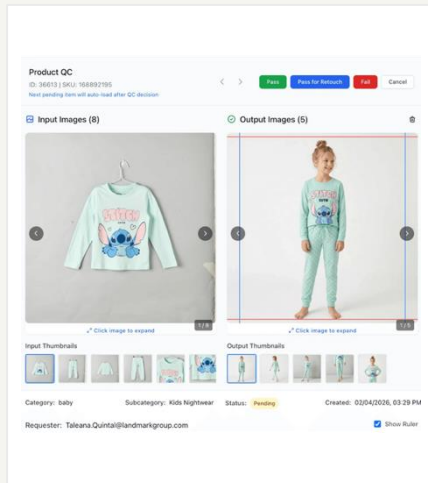

A Generative AI platform that converts raw mannequin product images into production-ready model-quality visuals at scale. Built for Landmark Group brands including Homecentre, Centrepont, and Homebox.

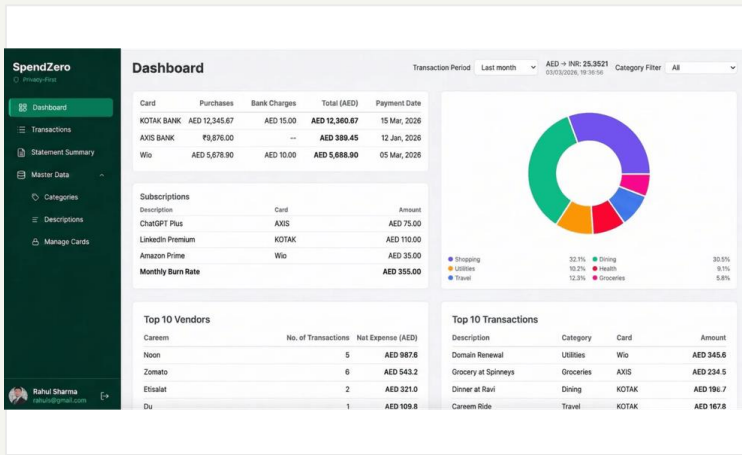

KEY CAPABILITIES

- ✓ Category-aware prompt intelligence for fashion, furniture, and home
- ✓ Multi-model orchestration (Seedance, Nano Banana) based on cost & speed
- ✓ Vision-based image transformation: mannequin → model/lifestyle visuals
- ✓ Human-in-the-loop QC workflow before publishing
- ✓ Scalable SKU processing pipeline

Tech Stack: Python Pipelines · Google Imagen · Generative AI APIs · Vision Models · Workflow Automation

Impact: Shoot-to-live reduced from 12 days → 7 days (~40% faster). Lower cost per asset vs traditional photoshoots. Enabled faster catalog scaling across multiple brands.

PROJECT SHOWCASE

SpendZero — Privacy-First AI Financial Intelligence

95%+ transaction categorisation accuracy. Zero third-party data sharing.

An LLM-based personal finance intelligence tool that pulls credit card statements directly from Gmail, categorises transactions with 95%+ accuracy, and generates a structured spend dashboard — all processed locally with no third-party aggregators.

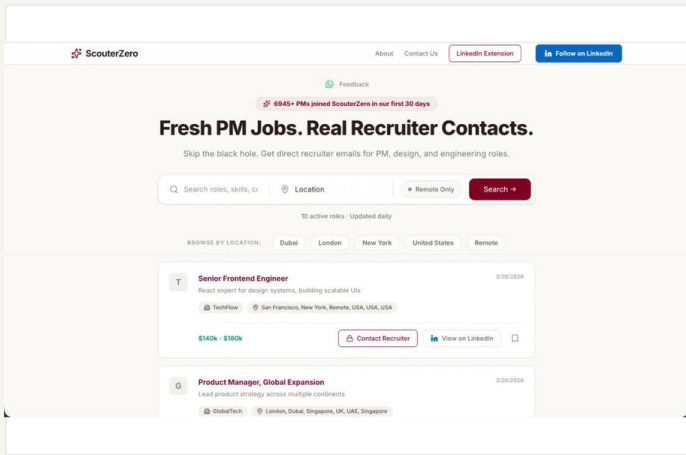

Tech Stack: Python · LLMs · Gmail API · Data Pipelines · Local Processing

Impact: Turned fragmented financial data into a structured, actionable spend dashboard. Zero data privacy compromise.

 [VIEW ALL SCREENSHOTS → APPENDIX P.15](#)

KEY CAPABILITIES

- ✓ Multi-format PDF/CSV statement parsing
- ✓ LLM-based transaction categorisation (95%+ accuracy)
- ✓ Intelligent merchant normalisation (messy → clean brand names)
- ✓ Context-aware classification (subscriptions vs shopping vs dining)
- ✓ Fully local data processing — privacy-first architecture

Tech Stack: n8n · Python · LLMs · Web Scraping · Chrome Extension API

Impact: 6,945 PMs joined in the first 30 days. 104K platform visits.
Reduced job search time by ~80%.

[VIEW SCREENSHOTS & AI WORKFLOW → APPENDIX P.16](#)

PROJECT SHOWCASE

ScouterZero — AI Career Intelligence for Product Managers

6,945 PMs joined in the first 30 days · 104K visits

An AI-driven career intelligence platform that scrapes thousands of PM job postings daily, runs AI filtering and summarisation, and surfaces high-signal opportunities with direct recruiter contacts. Built to eliminate the noise of job boards and reduce job search time by ~80%.

KEY CAPABILITIES

- ✓ Automated scraping via n8n + Python across major job boards
- ✓ LLM-based job summarisation: must-haves, salary signals, role quality scoring
- ✓ Matching engine for PM career trajectories
- ✓ Daily curated job feed with noise filtering
- ✓ LinkedIn Chrome Extension for smarter outreach

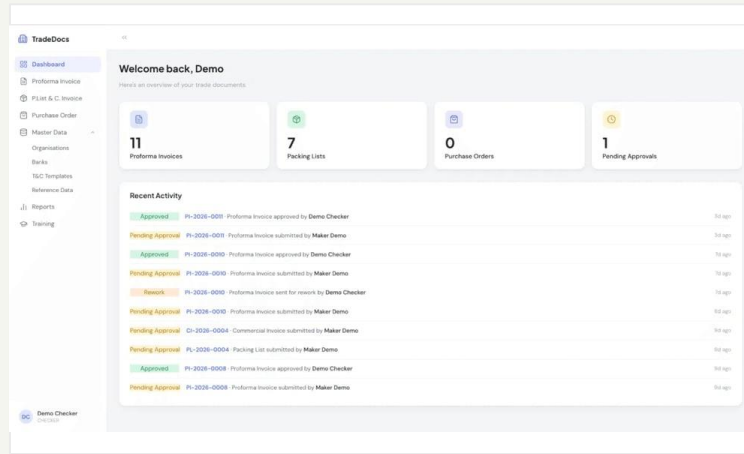

TradeDocs — Intelligent International Trade Documentation

Simplifying complex cross-border trade documentation with AI

An AI-powered platform that parses complex legal and business documents across jurisdictions and automates compliant document generation. Handles multi-jurisdiction trade docs — Proforma Invoices, Packing Lists, Commercial Invoices — in seconds.

KEY CAPABILITIES

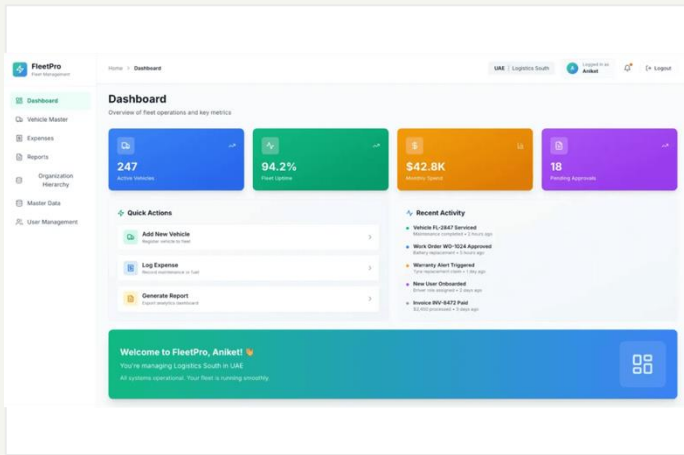

- ✓ NLP-based document parsing (Invoices, Bills of Lading, Packing Lists)
- ✓ LLM-powered compliance validation engine
- ✓ Maker-Checker approval workflow with role-based access
- ✓ Automated document generation with audit trail

Tech Stack: NLP Models · LLMs · Document Processing Pipelines · React · Supabase

Impact: Reduced risk of port delays, penalties, and compliance errors.
Handles multi-jurisdiction documents in seconds.

 [VIEW ALL SCREENSHOTS → APPENDIX P.17](#)

Tech Stack: Python · Django · OCR Models · ML Anomaly Detection · GPS Integration

Impact: 600-truck fleet managed. Improved data accuracy and reduced fuel leakage. Shipped in 6 weeks from zero.

 [VIEW SCREENSHOTS → APPENDIX P.18](#)

PROJECT SHOWCASE

FleetMind — AI-Powered Fleet & Asset Management

Built solo in 6 weeks. Managing a 600-truck fleet for Landmark Group.

A full-stack vehicle management system built entirely solo in 6 weeks for Landmark Group's UAE logistics operations. AI pipelines extract data from fuel receipts and maintenance logs, eliminating manual data entry and reducing operational leakage.

KEY CAPABILITIES

- ✓ OCR pipelines for automated fuel receipt extraction
- ✓ ML-based anomaly detection for fuel theft and inefficiencies
- ✓ Predictive maintenance modelling
- ✓ GPS vs odometer validation for fuel reconciliation

Full-Stack AI Builder — From Prompt to Production

I work across the full AI product stack — from defining the problem and designing the system architecture, to building the pipelines, shipping the product, and measuring the outcome.

 AI & LLMs	 Automation	 Backend	 AI Tooling
OpenAI / Anthropic API	n8n	Python	Cline
RAG Pipelines	Agentic Workflows	Django / FastAPI	Bolt.new
Prompt Evaluation	Playwright / Selenium	Supabase	Cursor
Vector DBs	Web Scraping	PostgreSQL	GitHub Copilot

10 Years of Building & Shipping Across Industries

AUG 2025 – PRESENT

Landmark Group, Dubai, UAE

AI Builder & Product Manager

Built FleetMind solo — full-stack fleet & asset management for 600 trucks in 6 weeks. Shipped Content Ginie, cutting shoot-to-live from 12 → 7 days. Delivered \$15M in cost savings through automated payment settlement and logistics optimisation.

JUL 2021 – DEC 2023

Reliance Retail — JioMart, Mumbai

Senior Program Manager & Product Manager

Led 3P marketplace launch achieving 188% of GMV targets. Grew fulfilment-centre share from 2% to 17%. Unlocked ₹20 Cr in revenue through slotted delivery launch across 3,100+ stores.

2019 – 2021

GEP Worldwide, Rotterdam & Mumbai

Senior Consultant — Supply Chain

Delivered supply chain transformation for Fortune 500 clients across Europe and India. Led procurement strategy, spend analytics, and process re-engineering.

Earlier: Infosys Consulting (SCM) · Hindustan Unilever (Leadership Intern, Nairobi) · Crompton Greaves (Supply Chain)

IIM Kozhikode · COEP Pune

IIM Kozhikode

MBA (PGDM)

One of India's premier management institutions. Developed strong foundations in business strategy, product management, and operational excellence.

COEP — College of Engineering, Pune

B.TECH, MECHANICAL ENGINEERING

Top-ranked engineering institution. Built rigorous analytical and technical problem-solving skills that bridge the gap between engineering and business.

I Don't Just Consult — I Build and Ship

Most product consultants hand you a strategy deck and leave. I stay until the system is live, tested, and delivering results. My background spans Fortune 500 supply chains, high-growth e-commerce, and production AI systems — which means I understand both the business problem and the technical solution.

01 Speed

I work in 2–4 week delivery cycles. You see working software, not slide decks. Iterative shipping ensures we prove value immediately.

02 Depth

10+ years of domain expertise across supply chain, e-commerce, and enterprise software means I ask the right questions before writing a single line of code.

03 Accountability

I've shipped systems managing 600-truck fleets, \$15M in cost savings, and 100K+ users. I'm accountable for outcomes, not just deliverables.

AM

LET'S BUILD SOMETHING TOGETHER

Ready to Ship Your AI System?

If you're looking to implement AI in a way that directly impacts efficiency, cost, or scalability — I focus on building systems that deliver measurable results in production. Let's talk about your project.

Retouch Desk — Platform Screenshot

Retouch Desk

A full-stack image retouching workflow management platform built for Landmark Group's creative operations. Integrates directly with Adobe Photoshop via a custom plugin.

- ✓ Summary reports: SKUs assigned, images retouched, avg. time per image
- ✓ Breakdown by retouch reason (background removal, colour correction, shadow cleanup)
- ✓ Breakdown by concept (Homebox, Max, Splash, Homecentre)
- ✓ User-level performance tracking for each designer
- ✓ Photoshop plugin for in-app queue management and task assignment
